SIGNING IN

Screen → Sign in · Get Started

Create a brand-new dealership, or sign in to one that already exists. Everything else in this manual happens after this step.

CREATING A DEALERSHIP FOR THE FIRST TIME

Do this once. Whoever does it becomes the Admin for the whole dealership.

- 01 On the sign-in card, click **Get Started** at the bottom.
- 02 Fill in the four fields:
 - **Dealership Name** – your trading name, e.g. Elite Motors LLC.
 - **Admin Name** – your own name.
 - **Business Email** – this becomes your login.
 - **Password** – choose carefully; there is no self-serve reset.
- 03 Click **Get Started Now**. Your dealership is created and you're signed in immediately – no confirmation email, no second step.

SIGNING IN DAY TO DAY

- 01 Enter your **Email Address** and **Password**.
- 02 Click **Secure Sign In**. A green welcome message confirms it.

DON'T BE THROWN BY THE NAME

The sign-in card reads **AutoProfitHub**, and the sidebar says **Synex** until a logo is uploaded. Same product – older branding surviving in two places. Chapter 19 replaces both with your own name and logo.

"CONNECTION ERROR. IS THE SERVER RUNNING?"

The page loaded but couldn't reach the server behind it. On free hosting the server sleeps after 15–30 idle minutes. Wait fifteen seconds and try again. If it keeps happening, whoever hosts the app should check the server logs.

SIGNING OUT

Bottom of the sidebar: **Sign Out**. On a phone it's at the bottom of the menu drawer. **Ctrl + K** also offers it.

FINDING YOUR WAY AROUND

Screen → the shell around every page

The sidebar, the phone layout, one keyboard shortcut worth learning, the floating assistant – and why your colleague's menu has items yours doesn't.

ON A COMPUTER

A permanent sidebar down the left, listing your sections in the order this manual follows. The page you're on is marked with a green bar. At the bottom: your name, your role, **Sign Out**, and **Collapse**, which shrinks the sidebar to icons when you need the width.

ON A PHONE

A bar across the bottom holds the five things you need on the lot: **Home**, **Cars**, **Sales**, **People**, **Forms**. Everything else is behind the menu icon at the top right, which opens the full list.

THE SHORTCUT WORTH LEARNING

Press **Ctrl** + **K** (**Cmd** + **K** on a Mac) anywhere in the app. Type a few letters and press **Enter** to jump to Dashboard, Inventory, Sales Registry or Financial Reports – or to sign out. **Esc** closes it.

SYNTAX, THE FLOATING ASSISTANT ADMIN ONLY

A round chat button sits in the bottom-right corner of every page for Admins. Ask it questions in plain English – "how many cars are over 60 days old", "what was last month's profit". Two extras in its header:

- The **microphone** lets you speak the question instead of typing; it sends by itself when you stop talking.
- The **speaker** toggle reads answers aloud – useful when your hands are busy.

For anything you need to justify with evidence, use the fuller assistant on the AI Insights page instead (Chapter 12). It shows its working and can grade photos.

WHY YOUR MENU DIFFERS FROM YOUR COLLEAGUE'S

There are three roles. Yours is printed under your name at the bottom of the sidebar.

ROLE	WHO IT'S FOR	MONEY FIGURES
STAFF	Salespeople and lot staff. Adds cars, records sales, handles customers and paperwork.	HIDDEN Profit, investment and ad spend are stripped out everywhere.
MANAGER	Everything Staff does, plus marketing, AI Insights, reports and the team.	VISIBLE Revenue, profit and cost basis.
ADMIN	The owner's account. Full access, including accounting, expenses and settings.	VISIBLE Plus the Synax assistant and the right to delete vehicles.

WHICH MENU SECTIONS EACH ROLE GETS

MENU SECTION	STAFF	MANAGER	ADMIN
Dashboard	✓	✓	✓
Inventory	✓	✓	✓
Sales	✓	✓	✓
Customers	✓	✓	✓
Documents & Forms	✓	✓	✓
Registry	✓	✓	✓
Photo Studio	✓	✓	✓
Communication	✓	✓	✓
Attendance Log	✓	✓	✓
Marketing	—	✓	✓
AI Insights / Ask	—	✓	✓
Reports	—	✓	✓
Team Management	—	✓	✓
Accounting	—	—	✓
Expenses	—	—	✓
Settings	—	—	✓

IF A PAGE BOUNCES YOU BACK

Typing the address of a page your role can't open returns you to the Dashboard. That's the permission check, not a fault. Ask an Admin to change your role in Team Management (Chapter 17).

DASHBOARD

Sidebar → Dashboard

Your opening screen: the numbers that matter, four shortcuts, and a standing alert about the cars quietly costing you money by sitting still.

THE TILES ACROSS THE TOP

TILE	WHAT IT COUNTS	WHO SEES IT
Inventory	Every vehicle on record, sold or not.	Everyone
Units Sold	Completed sales.	Everyone
Inventory Value	Money tied up in unsold cars: purchase cost plus repairs.	Manager, Admin
Total Revenue	All sale prices added up. Click it to open the Revenue Analysis report.	Manager, Admin
Ad Spend	Everything spent on advertising campaigns.	Admin
Net Profit	Profit across all sales.	Admin
Attendance	A shortcut. Click it to open the Attendance Log.	Everyone

QUICK ACTIONS

Four large buttons: **Add Vehicle** , **New Deal** , **Add Customer** and **Ask AI** . They are shortcuts to Inventory, Sales, Customers and AI Insights – nothing more.

AGING INVENTORY & HOLDING COSTS

Any unsold vehicle sitting **45 days or more** appears here as a card. The system charges a notional **\$35 a day** against it and totals those in the **Accumulated Cost** strip.

DAYS ON LOT	BADGE	WHAT THE CARD SUGGESTS
45-59	WARNING	Advertise harder, or run a test-drive promotion.
60-89	HIGH RISK	A 5% price drop, or a targeted campaign.
90+	CRITICAL	Auction it, or cut 10% to free the cash.

- Each card carries written advice. Where AI Insights has analysed that exact VIN you get its recommendation; otherwise the standard guidance for that age band.
- **Click a card** to open the full vehicle record (Chapter 05).
- The small document icon previews or downloads that car's paperwork without leaving the page.
- If nothing is aging you get **Lot Turnover is Healthy!** instead. That's the goal.

PARTNER SWAP NETWORK

The **Browse Partner Swaps** button in this section trades aging stock with other dealerships on the platform, instead of dropping the price or sending it to auction.

- 01 Click **Browse Partner Swaps**. It scans partner lots and lists their aging vehicles with the dealership name, days on lot and an estimated cost basis. An empty list just means nobody has anything right now.
- 02 Click the vehicle you want. It becomes your **Trading Target**.
- 03 Choose what you're offering: **cash** for a straight purchase offer, or **one of your own Available cars** for a true swap.
- 04 Send the proposal. A dedicated trade channel opens in Communication and you're taken straight to it to negotiate.

WHY THIS IS WORTH TRYING FIRST

A car that's dead stock on your lot is often fresh metal on someone else's forty miles away. A swap resets the clock on both cars without either dealership taking the price cut.

FURTHER DOWN THE PAGE

Managers and Admins also get three charts – recent revenue and profit, inventory split by status, and profit per vehicle. Admins get two extra panels: **Recent Expenses** (last 30 days) and **Team Performance** (sales made and vehicles added, per person).

INVENTORY

Sidebar → Inventory

The heart of the system. Every car you own, how you found it, what it really cost, and where it stands in reconditioning.

THREE WAYS TO ADD A VEHICLE

Click **Add New Vehicle** at the top right. The dialog supports all three methods at once – scan first, then correct whatever the scan got wrong.

METHOD A – SCAN THE DOCUMENT (FASTEST)

- 01 Drag the purchase document onto the dashed box at the top, or click **Upload Files**. On a phone, **Take Photo** opens the camera directly.
- 02 Photos, PDFs and Word documents are all accepted. **Select several at once** to push a batch – they're processed one after another with a short pause between each.
- 03 Wait for **AI is reading your document...** to finish. It pulls out the VIN, make, model, year, mileage, colour, purchase price and date, who you bought from, payment method, transport, repair, inspection and registration costs, the title number, and the seller's address.
- 04 Check all three tabs against the paper document. **Always check**. Then click **Add Vehicle**.

METHOD B – LOOK UP THE VIN

- 01 Type the 17-character VIN into **VIN Number**.
- 02 Click **NHTSA Lookup** beside it. Make, model, year and colour fill in from the official US vehicle database.
- 03 Read the confirmation – it tells you how many **active safety recalls** that VIN carries. Zero is what you want.
- 04 Fill in the purchase details yourself and save.

METHOD C – TYPE IT IN

Three tabs, filled left to right. A red asterisk means the field is required.

TAB	FIELDS
Vehicle Details	VIN *, Make *, Model *, Year *, Mileage *, Color *, Title Number
Purchase Info	Purchase Date *, Purchased From (Dealer / Auction / Individual), Seller Address, City, State, Zip, Purchase Price *, Payment Method (Cash / Check / Bank Transfer)
Costs & Docs	Transport Cost, Repair Cost, Inspection Cost, Fees

HOW YOUR COST BASIS IS BUILT

Total investment = purchase price + transport + repairs + inspection + fees. Every profit figure in the app measures against that number, so a cost skipped here is profit you'll wrongly celebrate later.

"VEHICLE ALREADY EXISTS"

That VIN is already in inventory. The message carries a **View Vehicle** button that opens the existing record instead of creating a duplicate.

FINDING A CAR

- The wide search box matches make, model, VIN and year. Any fragment works.
- **Sort: Date** toggles to **Sort: Status**, which puts Available first, then Reserved, Returned, Sold.

THREE WAYS TO LOOK AT THE LOT

VIEW	BEST FOR
List	Scanning many cars at once: vehicle, year/miles, purchase, total cost, status, aging.
Grid	A visual sweep of the lot with status badges and aging.
Recon Board	Managing work in progress – see below.

THE RECON BOARD

One column per stage of getting a car retail-ready. Sold and Returned vehicles are hidden here, because they're done.

STAGE 1	STAGE 2	STAGE 3	STAGE 4	STAGE 5	STAGE 6
Acquired	Detailing	Inspection	Mechanical Repairs	Photo Ready	Listed

To move a car, use the small left and right arrows on its card to step one stage at a time, or the dropdown on the card to jump straight to any stage. Columns with nothing in them say **Empty stage**.

STATUSES, AND WHAT THEY MEAN

STATUS	MEANING
AVAILABLE	On the lot, ready to sell. Counts toward inventory value.
RESERVED	Held for a buyer; deal not yet finalised.
SOLD	Set automatically when you record a sale. Drops out of inventory value.
RETURNED	Came back after a sale.

THE STATS STRIP

Total Investment and **Avg Purchase** for Managers and Admins, then **Available** and **Aging (60+)** for everyone. Watch that last one – it's the number that quietly eats margin.

THE STANDALONE VIN LOOKUP BUTTON

Next to **Add New Vehicle**. Use it to check a car you're only *thinking* about buying, without adding anything.

- 01 Type the 17-character VIN, or tap the camera icon to photograph a document and let it read the VIN out of the picture.
- 02 Press search. You get back Year, Make, Model, Body Class and Engine.

DELETING A VEHICLE **ADMIN ONLY**

The red bin icon on a row, or inside the vehicle record, with a confirmation. This removes the vehicle permanently – if the car simply came back, set its status to **Returned** instead.

THE VEHICLE RECORD

Opens from → any vehicle, anywhere in the app

Six tabs covering a car's entire life – money in, work done, advertising, the sale, customer interest, and paperwork. This is where most of your day actually happens.

THE HEADER

- The **VIN chip** is clickable – one click copies the VIN to your clipboard.
- **Investment** shows the running cost basis: purchase plus every repair logged so far.
- **Edit Details** turns the dialog into an editing form; **Cancel** comes back out.
- **Documents** lists every file attached to this car, each with preview and download.
- Admins also get a bin icon to delete the vehicle.

TAB 1 – FINANCIALS

Read-only. Purchase breakdown (price, transport, inspection, fees), repair total, initial total, total investment, current status, and – once sold – net profit.

TAB 2 – MANAGE REPAIRS

Log work done *after* purchase. Each repair raises the cost basis immediately, so profit stays honest.

- 01 Enter the **Repair Shop** * – e.g. Master Auto.
- 02 Enter **Parts Cost** * and **Labor Cost** * separately. Both are required; put 0 where one doesn't apply.
- 03 Add a short **Description** * so the line still means something in six months.
- 04 Submit. It appears under **Recent Repair History** and the investment figure in the header goes up.

TAB 3 – ADVERTISING

Attach ad spend to this particular car, so you can see what it cost to sell it.

- 01 **Campaign Name** – e.g. "FB Ad for Honda Civic".
- 02 **Platform** – Facebook, Google, or wherever it ran.
- 03 **Spend Amount**, then **Start Date** and **End Date**.

04 Submit. The spend now shows against this vehicle and rolls into Marketing and Reports.

TAB 4 – RECORD SALE

This tab disappears once the car is sold. It is the one and only place a sale is created.

01 Customer Name * and Phone Number *.

02 Email (optional) and Customer Address *.

03 Sale Price * and Sale Date *.

04 Optionally attach the Bill of Sale Document right here – click the upload area and pick the file.

05 Click .

The vehicle flips to , the deal appears on the Sales page, profit is calculated against total investment, and the Dashboard and Reports move accordingly.

TAB 5 – VIEWING NOTES

For walk-ins and test drives that didn't close. Record Customer Name *, Contact Number *, Email and the Note/Feedback *. Everything logged shows under Previous Viewings – three people saying the same thing about the price is a signal worth having in writing.

TAB 6 – DOCUMENTS

DOCUMENT	WHERE IT COMES FROM
Used Vehicle Record	The PDF the system generates from your purchase document.
Original Source	The file you actually uploaded – auction sheet, invoice or photo.
Bill of Sale	Attached when the car is sold.

Each has , which opens a viewer, and .

SALES

Sidebar → Sales

Every closed deal, what it made, and the paperwork behind it.

SALES ARE NOT CREATED HERE

You record a sale on the car itself: Inventory → open the vehicle → **Record Sale** (Chapter 05). This page is where deals land afterwards.

WHAT'S ON THE PAGE

- **Total Revenue** – everyone sees this.
- **Total Profit** and **Avg Profit / Unit** – Manager and Admin only, along with the Profit column in the table.
- Each row shows vehicle, customer name and phone, date, price, a documents menu and profit.
- Click any row to open the full vehicle record.

FIXING A SALE MANAGER & ADMIN

- 01 Click the pencil on the row to open **Edit Sale Details**.
- 02 Correct **Customer Name**, **Contact Number**, **Email**, **Address**, sale price or **Sale Date**, then save.

DELETING A SALE MANAGER & ADMIN

THIS PUTS THE CAR BACK ON THE LOT

Deleting a sale returns the vehicle to **AVAILABLE** in inventory. That's right for a deal that fell through – but it also means the car reappears for sale, so don't reach for it to fix a typo. Edit instead.

MISSING A BILL OF SALE?

The document icon on a row is **green when a bill of sale exists** and grey when it doesn't. On a grey one the menu offers **Upload Bill of Sale**, which jumps to Documents & Forms with that VIN already filled in.

CUSTOMERS

Sidebar → Customers

Buyers, leads and walk-ins in one list, each linked to the vehicle they care about.

ADDING SOMEONE

- 01 Click **Add Customer**.
- 02 Fill in **First Name**, **Last Name**, **Contact Number**, **Email**, **Address**, **City**, **State** and **Zip**.
- 03 Pick a **Category** – this is how you'll sort follow-ups later:
 - **Bought Vehicle** – closed. **Came for Visit** – walked the lot.
 - **Lead** – enquired. **Follow Up** – needs chasing. **Other** – everything else.
- 04 Optionally link a vehicle: use **Search Inventory Vehicle** to filter your stock, then pick from **Linked Vehicle**.
- 05 Save.

IMPORTING EVERYONE YOU'VE ALREADY SOLD TO

Click **Import Sales**. Every buyer recorded on the Sales page is pulled into the customer list in one pass. Run it once when you start, and again after a busy month.

ATTACHING DOCUMENTS TO A PERSON

- 01 Open the customer's document dialog from their row.
- 02 Give the file a **Document Name** – "Driver's licence", "Finance approval" – and choose the **File**.
- 03 Upload. It's listed under **Stored Documents** from then on.

THE CUSTOMER DETAIL VIEW

Clicking a customer opens their record: **Purchased Vehicles**, pulled from Sales, and **Related Documents**. The search box at the top filters the whole list.

DOCUMENTS & FORMS

Sidebar → Documents & Forms

The paperwork engine. Turn a purchase document into a finished Used Vehicle Record PDF, and attach bills of sale to cars you've sold.

Two tools sit side by side. Use the left one when a car arrives, the right one when it leaves.

LEFT – GENERATE A USED VEHICLE RECORD

- 01 Choose one or more source files: purchase invoice, auction sheet, or title.
- 02 Pick one of the two buttons:
 - **Generate the form only** – produces the PDF and files it in the Registry.
 - **Generate and push to inventory** – does the same and creates the vehicle record too.
This is the fast lane.
- 03 Watch the progress counter on a batch. Anything that fails stays listed on screen with its reason, so you can fix and retry – pop-up messages scroll away, that list doesn't.
- 04 With a single file, the PDF downloads automatically when it's done.

WARNINGS YOU MAY SEE, AND WHAT TO DO

WARNING	WHAT IT MEANS	DO THIS
AI extraction is not configured	The server has no AI key, so it fell back to basic text recognition.	Check every field before saving, and tell whoever hosts the app.
Address could not be extracted	The seller's address wasn't readable.	Type it in by hand before adding to inventory.
VIN failed checksum validation	The VIN read off the page isn't mathematically valid – usually a misread character.	Compare it to the paper document character by character.
Logged to registry (already in inventory)	Not an error. The car was already there, so only the document was filed.	Nothing.

RIGHT – UPLOAD A BILL OF SALE

This attaches the sale document to a car **already in your inventory** and fills in its disposition details.

- 01 Choose the bill-of-sale or repair file, one or several.

- 02 Fill any optional fallback the document might not carry clearly: `VIN Fallback` , `Customer Name / Job Description` , `Contact Number` , `Email` , `Sale Price Fallback` , `Repair Total Fallback` .
- 03 Upload. The vehicle's record is updated and an amended PDF is produced.

THE MOST COMMON REJECTION

If the VIN on the bill of sale isn't in your inventory, the upload is refused and the reason stays on screen. Add the vehicle first (Chapter 04), then come back. Arriving here from the Sales page via `Upload Bill of Sale` pre-fills the VIN for you.

RECENT RECORDS

The last three PDFs you generated, each with `Preview` , `Download PDF` and `Delete Record` . `Clear Recent` empties the shortlist; `Full Registry →` opens the complete archive.

REGISTRY

Sidebar → Registry

The permanent filing cabinet: every document the system has generated or taken in, searchable and correctable.

- 01 Search by VIN, make, model, year or original filename.
- 02 Narrow with the **Filter type** dropdown: All, Used Vehicle Record, Title, Sales Agreement, Bill of Sale, Repair Invoice, Inspection, Other.
- 03 On each row: **View Document** opens the preview, the download icon saves it (record, original source, or sale document), the pencil edits the details, the bin deletes the entry.

CORRECTING A DOCUMENT'S DETAILS

The pencil opens **Edit Document Details** – use it when a scan got something wrong after the PDF was already filed.

GROUP	FIELDS
Vehicle	Year, Make, Model, Color, Mileage, Title Number
Acquisition	Purchase Date, Purchased From, Seller Address, Seller City, State
Sale / Disposition	Sale Date, Sale Price, Customer Name, Buyer Address, City, State, DL Number, Disposal Odometer

MARKETING

Sidebar → Marketing

Write a listing with AI, cut the photo backgrounds, publish to seven channels at once, then track what each channel actually returned.

PUBLISHING A LISTING

- 01 Choose the car from **Select Inventory Vehicle (optional)**. It auto-fills the VIN, specs, mileage and price. Skip it and type the details if the car isn't in inventory yet.
- 02 Set **Condition** – e.g. Excellent – and adjust the asking price, which defaults to what you paid.
- 03 Add photos: drag them onto the upload box, or click to browse. No files to hand? Paste comma-separated image URLs in the fallback field beneath.
- 04 Tidy the photos. Hover a thumbnail for the scissors icon to **Remove background**, or use **Remove background on all**. The undo arrow restores the original if you don't like a result.
- 05 Click **Generate + Publish Ad**. AI writes the SEO title and description, and the listing goes to every channel.

THE SEVEN CHANNELS

Facebook Marketplace • Instagram • TikTok • Dealer Website • Craigslist • YouTube Shorts • Google Vehicle Listings

BACKGROUND REMOVAL TAKES REAL TIME

Roughly **40 seconds per photo**, and it runs inside your own browser – your photos are never uploaded for this step, and it works with no internet connection. Six photos is about four minutes. The counter tells you which photo it's on.

THE LISTING TABLE

One row per listing, showing VIN, SEO title, channels, and live counts of impressions, clicks and leads. Three buttons per row:

BUTTON	WHAT IT DOES
Schedule	Marks the listing's queued posts as scheduled across the platforms.
Track	Records a fresh round of impressions, clicks and leads, attributed to a channel.
Lead	Captures a buyer enquiry against this listing and its source channel.

The leads dialog lists everything captured: **Lead Name** , **Platform** , **Campaign** , **Contact** , and when it came in.

ADVERTISING CAMPAIGNS AND SPEND

- 01 Click **Add Advertising** .
- 02 Enter the **Campaign Name** – e.g. "Summer Blowout".
- 03 Pick the **Platform** (Facebook, Instagram, TikTok, Google, Other) and **Status** (Active, Paused, Completed).
- 04 Enter the amount spent and, if you have one, a budget cap. Set **Start Date** and **End Date** .
- 05 Link it to a vehicle, or choose **General / No Vehicle** for brand advertising.
- 06 Paste or write the **Ad Copy** and save. The spend now feeds Ad Spend on the Dashboard and the Advertising tab in Reports.

PHOTO STUDIO

Sidebar → Photo Studio

Turn phone photos taken on a messy lot into clean listing images with a studio backdrop – without sending a single file anywhere.

- 01 Drag photos onto the upload area, or click it to browse. PNG, JPG and GIF, up to 10MB each. Add as many as you like.
- 02 Hover a thumbnail. Four controls appear:
 - **Scissors** – remove the background on that one photo.
 - **Undo arrow** – restore the original; only shows after a cutout.
 - **Download** – save that photo.
 - **X**, top right – remove it from the studio.
- 03 For a batch use `Remove background on all`, then `Download all` when it finishes.

WHAT YOU GET BACK

The car is cut out and placed on a studio backdrop: a black gradient wall behind it and a lit elliptical turntable floor beneath, matched to where the wheels actually meet the ground. It reads as a marketplace listing photo rather than a cut-out sticker. Stray specks the cutout leaves behind – a phantom wheel, a wisp of sky – are dropped automatically.

BUDGET THE TIME

About **40 seconds per photo**, every time. That cost is the processing itself, not a one-off download, so it doesn't get faster on the second run. Ten photos is roughly seven minutes. The line under the buttons shows the stage, the percentage and which photo it's on, so you can tell work from a freeze.

Because it all happens in your browser, this works with no internet at all – useful in a corner of the lot with no signal.

SAME TOOL, TWO PLACES

These identical controls also sit on the Marketing page's photo uploader, so you can cut backgrounds while building the listing instead of making a separate trip here.

AI INSIGHTS / ASK

Sidebar → AI Insights / Ask

Analysis built from your own records – not templates – plus an assistant that shows its working and can grade vehicle photos.

THE HEALTH SCORE

A ring at the top right scores the dealership out of 100: **EXCELLENT** 80+, **HEALTHY** 65–79, **NEEDS ATTENTION** 50–64, **CRITICAL** below 50. A red badge beneath counts critical alerts.

QUICK STATS

Active Inventory · Purchases · Closed Sales · Avg Days on Lot · Customers · Documents.

THE INTELLIGENCE BRIEFING

- 01 Filter with the chips along the top: **All**, **Critical**, then one chip per category the analysis produced.
- 02 Or type into **Search insights...** to find a specific vehicle or theme.
- 03 Click an insight to expand it, or use **Expand All** / **Collapse All**. Four things sit inside each:
 - **Extracted Facts** – the numbers it used.
 - **Reasoning Explanation** – why it reached this conclusion.
 - **Recommended Steps** – what to actually do.
 - **Evidence Records** – the specific records behind it, so you can check.
- 04 Only the first four show by default; **Show more** reveals the rest.

ASKING A QUESTION

- 01 Tap a ready-made prompt to load it, then edit – for instance
 What is our current margin and profit?
- 02 Or type your own question in the box.
- 03 To have photos graded, click **Add images**, attach them, and ask something like "review these images and tell me the score". **Clear images** empties the tray.
- 04 Click **Ask AI**. While it works it says it's reviewing your records and scoring the images.

IT ONLY KNOWS YOUR DATA

The assistant answers from your dealership's own records – inventory, sales, expenses, documents. It won't invent market data it doesn't have, which is exactly why its answers are worth acting on.

THE SNAPSHOT PANEL

Down the right: revenue, profit and ad spend; purchase intelligence and purchase sources; top selling brands; your oldest stock alert; and recent acquisitions.

ACCOUNTING

Sidebar → Accounting

Every pound in and out of the business in one ledger, filterable by date and exportable for your accountant.

THE THREE FIGURES AT THE TOP

FIGURE	BUILT FROM
Total Income	Every sale price.
Total Outgoing	Vehicle purchase and prep costs, plus business expenses, plus advertising spend.
Net Cash Flow	Income minus outgoing.

THE TRANSACTION REGISTRY

One line per movement, newest first, each tagged with where it came from:

- **Sale:** [vehicle] – income, from the Sales page.
- **Purchase & Prep:** [vehicle] – outgoing, from Inventory (purchase plus repairs).
- **[Expense category]** – outgoing, from the Expenses page.
- **Ad:** [campaign] – outgoing, from your advertising campaigns.

FILTERING AND EXPORTING

- 01 Set **From** and **To** dates. **Clear** resets them.
- 02 Click the download button to export the filtered list as a CSV. It saves as `accounting-transactions-YYYY-MM-DD.csv` and opens in Excel or Sheets.

Two shortcuts sit alongside: **Manage Expenses** and **View Cash Flow**.

COMMUNICATION

Sidebar → Communication

Internal chat channels, plus the channels that open automatically when you propose a vehicle swap to another dealership.

FIRST TIME ON THIS PAGE

If you see `Welcome to Communication` and no channels, click `Initialize Channels`. That creates four channels and adds everyone at your dealership to them:

- `#general` – everything else.
- `#sales-team` – deals in progress.
- `#service-dept` – reconditioning and repairs.
- `#inter-dealership` – conversations with partner dealerships.

DAY TO DAY

- 01 Pick a channel from the left. On desktop the first one opens by itself.
- 02 Type in the box at the bottom. `Enter` sends; `Shift` + `Enter` starts a new line without sending.
- 03 Use `Search messages...` to find something said earlier.
- 04 The `Team Members` list shows everyone and their role.

CREATING A CHANNEL

The + next to `Channels`. Name it in lowercase with dashes – the placeholder `channel-name` shows the convention.

SWAP PROPOSALS LAND HERE

When you send a swap offer from the Dashboard's Partner Swap Network (Chapter 03), a dedicated trade channel is created and you're dropped straight into it. Negotiate there.

EXPENSES

Sidebar → Expenses

Running costs that aren't attached to any one car – rent, utilities, software, insurance.

- 01 Click the add button. Enter a **Category** – e.g. Rent, Utilities, Software. Reuse the same wording each month so category totals mean something.
- 02 Enter the **Amount** and the **Date**.
- 03 Add **Notes** if the line needs explaining, then save.
 - The search box matches both category and notes.
 - The pencil edits a row; the bin deletes it after a confirmation.
 - Three totals sit above the table: **Total Expenses**, **Categories** (how many distinct ones) and **Avg Expense**. They follow your search, so searching "fuel" totals just the fuel.

WHICH PAGE DOES A COST BELONG ON?

Repairs to a specific car go on that car's **Manage Repairs** tab. Advertising goes on **Marketing**. Everything else – the cost of being open – goes here.

REPORTS

Sidebar → Reports

Three finished reports in one place. Everything is calculated from what you've already entered – there's nothing to fill in.

The page loads all three data sets up front so switching tabs is instant.

Compiling Analytics Data... is the one-off wait.

TAB 1 – P&L REPORT

A profit and loss statement. Choose the **Period** : **All Time** , **Monthly** or **Yearly** .

LINE	HOW IT'S CALCULATED
Revenue	Total of all sale prices in the period.
COGS	Cost of the cars sold – purchase plus prep.
Gross Profit	Revenue minus COGS.
Ad Spend	Advertising in the period.
Op. Exp	Business expenses in the period.
Net Profit	Gross profit minus ad spend and operating expenses.
Units	Cars sold.

TAB 2 – CASH FLOW

Total Income, Total Outgoing, Net Cash Flow and the full transaction registry – the same ledger as Accounting, available to Managers too.

TAB 3 – ADVERTISING

The full marketing view: campaigns, spend, channels and performance. **Add Advertising** at the top right works here as well.

REVENUE ANALYSIS

Reached by clicking the **Total Revenue** tile on the Dashboard. Choose a grouping for a monthly or yearly breakdown of revenue and profit, plus the all-time **Total Gross**.

TEAM MANAGEMENT

Sidebar → Team Management

Add people, set what they're allowed to see, and check how each of them is doing.

ADDING A TEAM MEMBER

- 01 Click the add button. Enter their **Full Name** and **Email Address** – the email is their login.
- 02 Set an initial password and tell it to them directly; they'll use it to sign in.
- 03 Choose the **Permissions Level**: **STAFF**, **MANAGER** or **ADMIN**. Chapter 02 shows what each unlocks.
- 04 Save. They can sign in straight away.

EDITING SOMEONE

The pencil on their card. You can change name, email and permission level. **Leave the password field blank to keep their existing password** – only type in it if you're deliberately resetting it.

REMOVING SOMEONE

The bin, with a confirmation. They lose access immediately, but their history stays: the sales they made and vehicles they added remain on record.

READING THE PAGE

- Counts at the top: **Total Team**, **Administrators**, **Managers**, **Staff Members**.
- Each card shows units **Sold**, vehicles **Added**, and that person's attendance percentage.
- **Recent Activity Log** at the bottom shows who did what, most recent first.

ATTENDANCE LOG

Sidebar → Attendance Log

Daily present/absent marking with a running percentage. Staff mark themselves; Admins can correct anyone.

THE THREE DATE BOXES

BOX	CONTROLS
Selected Date	The single day you're marking. Defaults to today.
Range From	Start of the period the percentages cover. Defaults to the 1st of this month.
Range To	End of that period. Defaults to today.

IF YOU'RE STAFF OR A MANAGER

- 01 Check `Selected Date` is the right day.
- 02 Choose `PRESENT` or `ABSENT` on your own row.
- 03 Submit. You'll see `Attendance submitted`.

ONE SUBMISSION PER DAY – PERMANENTLY

Once you submit for a date you cannot change it. Trying again returns `Attendance already submitted for this date`. If you got it wrong, an Admin has to fix it. Check the date before you press the button.

IF YOU'RE AN ADMIN

You see every team member's row and can set `PRESENT` or `ABSENT` for anyone, on any date, at any time, then `Save` that row. There's no once-only limit on your edits – that's the point of the role.

THE SUMMARY

`Team Members` (how many rows you can see), `Your Present Days` and `Your Attendance %`, all measured across the From-To range. `Refresh` re-reads everything from the server.

SETTINGS

Sidebar → **Settings** – the last item on the menu

Your dealership's name, logo and contact details, which appear across the app and on the documents it generates.

UPLOADING YOUR LOGO

- 01 Hover the logo tile on the left and click the upload icon.
- 02 Pick your file. Aim for **512×512 pixels**, SVG or PNG, with a transparent background.
- 03 Save. It replaces the placeholder **AI** mark in the sidebar and the mobile header immediately – no reload needed.

BUSINESS INFORMATION

- 01 Set **Dealership Name**. This replaces "Synex" at the top of the sidebar.
- 02 Fill in **Business Address**, **Phone Number** and **Contact Email**.
- 03 Click **Save Changes**.

WORTH DOING ON DAY ONE

Five minutes here turns generic screens and generic PDFs into your dealership's. Do it before you generate paperwork you'll hand to a customer.
